1994 - 1994	Lin's General Hospital, Chiayi	Registered Nurse

Research specialty:

Professor Chen has established an inter-professional research team called the “Health Promotion for Older Adults” since 2000. The research team has been focusing on developing and applying various complementary/alternative therapies (e.g., tai chi, yoga, elastic band, and acupunch exercises) to promote health of the older adults. Up-to-date, the research team has developed five senior-tailored exercise programs: 1) the Simplified Tai-Chi Exercise Program (STEP), 2) the Silver Yoga (SY) exercise program, 3) the Senior Elastic Band (SEB) exercise program, 4) the Wheelchair-bound Senior Elastic Band (WSEB) exercise program, and 5) the Healthy Beat Acupunch (HBA) exercise program. These exercise programs have been applied to various elderly populations (such as community-dwelling older adults, transitional frail older adults in long term care facilities, older adults in wheelchairs, and older adults with dementia) with positive health promotion outcomes.
